

Course Number

GEO-202-01

Course Description

Processes operating on and near the Earth's surface are responsible for the development of landforms, and the evolution of these landforms through time. This course covers erosional and depositional processes of glaciers, rivers, hillslopes, and wind, and the geochemical reactions responsible for the formation of soils and caves. These topics are covered within the context of the geologic evolution of the Mohawk Valley since the end of the last Ice Age

Academic Term

21/SP

Instructor

Rodbell, Donald

Location & Meeting Time

Olin Building-307+ M/W/F 12:30PM-01:35PM LEC

Petition

Y

Credits

1.00

Capacity

20

Total Students

21
