

Course Number

BME-240-01

Course Description

Transient analysis of RLC circuits; modeling of circuits using differential equations; system models and properties; Laplace transforms applied to circuit and system design and analysis; system functions; complex frequency; poles and zeros; stability; frequency response; filter design.

Academic Term

22/SP

Instructor

Pappu, Chandra

Location & Meeting Time

Wold Center-010+ M/W/F 11:45AM-12:50PM LEC

Credits

1.00

Capacity

24

Total Students

19

Common Curriculum

WAC Writing Across Curriculum

Academic Department

Biomedical Engineering

Field Of Study

Biomedical Engineering (BME)
