

Course Number

PHL-265-02

Course Description

Is it possible to build a computer that effectively simulates human intelligence? If we did so, would the computer really be intelligent, or would it merely seem to be: Would the computer have free will? Do we have free will, or is human freedom merely an illusion? Do we have immaterial souls that can survive the deaths of our bodies and brains? In this advanced introduction to the philosophy of mind, we will consider these and other questions about what it means to have a mind, and about the relationship between mind and the brain.

Academic Term

22/FA

Instructor

Bergamaschi Ganapini, Marianna

Location & Meeting Time

M/W/F 11:45AM-12:50PM LEC

Credits

1.00

Capacity

20

Total Students

0
