```
Course Number
PSY-300-01
Course Description
Students will learn how to conduct research in psychological science, including hypothesis development,
research design, data collection, scientific writing, ethical considerations, and dissemination. Students will also
learn how to conduct statistical analyses using the SPSS software package, to include regression as well as
analysis of within-participant and factorial designs. In the capstone assignment, students will develop their own
hypotheses and design their own psychological experiments with which to test those hypotheses.
