Course Number
PHL-265-01
Course Description

Is it possible to build a computer that effectively simulates human intelligence? If we did so, would the computer really be intelligent, or would it merely seem to be: Would the computer have free will? Do we have free will, or is human freedom merely an illusion? Do we have immaterial souls that can survive the deaths of our bodies and brains? In this advanced introduction to the philosophy of mind, we will consider these and other questions about what it means to have a mind, and about the relationship between mind and the brain.

Academic Term
20/WI
Instructor
Bergamaschi Ganapini, Marianna
Location & Meeting Time
Bailey Hall-102+ T/TH 09:00AM-10:45AM LEC
Petition
N
Credits
1.00
Capacity
20
Total Students
20
