Course Number PHY-200-01 Course Description

Selected topics in molecular biophysics including an overview of proteins, nucleic acids, viruses and bacteria, with an emphasis on molecular structure and functioning. Experimental techniques used in modern biophysical research included in the course are various optical spectroscopies and microscopies, as well as hydrodynamic methods (sedimentation, diffusion, viscosity, electrophoresis), NMR, and x-ray diffraction.

Academic Term 20/WI Instructor Wagner, Jeffrey Location & Meeting Time Integrated Science & Engineering Complex-018 M/W/F 10:30AM-11:35AM LEC Petition Ν Credits 1.00 Capacity 24 **Total Students** 7 Additional Information http://www.union.edu/Physics Academic Department Physics and Astronomy Field Of Study Physics (PHY)
