

Course Number

PSY-300-01

Course Description

Students will learn how to conduct research in psychological science, including hypothesis development, research design, data collection, scientific writing, ethical considerations, and dissemination. Students will also learn how to conduct statistical analyses using the SPSS software package, to include regression as well as analysis of within-participant and factorial designs. In the capstone assignment, students will develop their own hypotheses and design their own psychological experiments with which to test those hypotheses.
